1. Mavyret: For patients with genotypes 1, 2, 3, 4, 5, or 6 chronic hepatitis C virus (HCV); or for genotype 1 infection previously treated with an NS5A inhibitor or an NS3/4A protease inhibitor, but not both.

This list represents brand products in CAPS and generic products in lowercase italics. This list is subject to change. Removed drugs and suggested alternative drugs and alternative drug copay tiers may vary depending upon the enrollee's EGWP formulary. Alternative drugs are on the Medicare Part D formularies, unless otherwise noted. There may be additional plan restrictions. Only the prescriber can determine if an alternative drug is appropriate for a Medicare Part D enrollee given the individualized nature of the drug therapy. This is not an all-inclusive list of non-formulary drugs or available drug options. For specific formulary information and additional alternatives, refer to the enrollee's EGWP benefit plan and formulary.

This list indicates the common uses for which the drug is prescribed. Some drugs are prescribed for more than one condition. This information is not a substitute for medical advice or treatment. CVS Caremark assumes no liability whatsoever for the information provided or for any diagnosis or treatment made as a result of this information.

An exception process may exist for specific clinical or regulatory circumstances that require coverage of a removed medication. Subject to applicable laws and regulations.

This document contains references to brand-name prescription drugs that are trademarks or registered trademarks of pharmaceutical manufacturers not affiliated with CVS Caremark. Listed products are for informational purposes only and are not intended to replace the clinical judgment of the doctor. Your privacy is important to us. Our employees are trained regarding the appropriate way to handle your private health information
